

IDEASS participates in the Technology Platform for organic food and farming

December 2012

In November 2012, a membership agreement has been established by the IDEASS Programme with the Technology platform for organic food and farming (Food, Fairness and Ecology) represented by his Secretariat, based in Brussels (Belgium).

The Technology platform is an initiative of TP Organics. It integrates views of the organic sector and civil society to represent a broad perspective on research and development priorities that can leverage organic food and farming's potential to address contemporary challenges. TP Organics was initiated in 2007 with the aim to identify the research priorities in organic sector, as research is fundamental factor to find solutions to social challenges, development of the sector and innovations. It is the first and only one Technology Platform that deals in particular with organic agriculture and food production.

The participation of the IDEASS Programme in this network will facilitate the access to wider interest information circulating in this European network, to be disseminated at international level.
