

The CENSA of Cuba presents its platform for innovation, technology, training and organization to improve the dairy sector at Fair of the Knowledge of South in Panama

The National Centre for Animal and Plant Health (CENSA) of Cuba, inventor of the Stabilak for the natural conservation of milk, is offering technical assistance for the improvement of the dairy chain to the interested countries and partners. This new platform for innovation, technology, training and organization aims to improve the dairy sector from the point of view of production and quality of milk and dairy products, for the benefit of producers and of the society in general, also fostering market positioning and sustainability.

The CENSAs Project for South-South cooperation with the LEDAs Network of Dominican Republic was presented at the [Fair of Knowledge of South in Panama](#) (May 2012), thus being selected as a best practice to be implemented in the participating countries. The National Center for Animal and Plant Health (CENSA) of Cuba, established in 1969, is an organization of excellence with highly qualified personnel to carry out its mission: to contribute preserving and improving plant, animal and human health.

The [Integrated Program for the Improvement of Production and Quality of Milk](#) – PROCAL, is an integrated package of twelve actions integrated by the scientific and practical results achieved by CENSA in the last 20 years in the field of dairy. The Program takes into account also the international expertise in the subject and is aimed to improve the dairy sector, organizing chains of small and medium enterprises of producers and transforming it into a source of economic welfare to enable social inclusion and development.
